

Social Science Automation

Turning Text Into Data

- Social Science Automation, Inc
- Dr. Michael D. Young
- Looking for a team we can TRUST

Research Areas

- We turn text into data
 - Linguistic
 - Psychological
 - Relational
 - Event

→ **predict behavior**

For example, we have developed models that predict with > 84% accuracy which NFL draft candidates will be suspended due to drug or alcohol use or other rule violations using **only** their pre-draft speech.

Capabilities

- Profiler Plus: Text coding engine currently used by IC agencies for a variety of projects.
 - High volume, near real-time automated text analysis in English, Arabic, Spanish, Russian, and Chinese.
- Coding scheme development.
 - Psychological measures.
 - Social relations.
 - Sentiment.
 - Behavior and Events from News.
- WorldView: Software for displaying and analyzing proposition networks from communications flows.
- GOTS social network analysis software developed for the IC.

Looking for...

- A team that wants to add natural language processing and coding to its suite of tools for developing measurement protocols for interpersonal trust and trustworthiness.
- We are not seeking to lead a team, nor to design or administer experimental protocols.
