The  
**Integrated  
Customization  
Environment**  
for  
rapid adaptation of  
Information Extraction  
to new corpora and  
domains

- Supports rapid creation of new information extraction systems:
  - create new classes of entities
  - define new relations
- Mixed initiative system:
  - System guides learning from corpora
  - User reviews system proposals and retains top-level control
- All interaction via GUI using English phrases
  - Reduces learning time for new users
- Operates internally using dependency paths
- Open source, Apache license, all Java
- Initial development under IARPA KDD program
