

# SimSpace Range - a ReSCIND Testbed

ReSCIND Proposer Day February 2023

**CEO:** William Hutchison, Senior Officer from the **US Cyber Command CTO:** Lee Rossey, Head of Cyber Security from **MIT Lincoln Laboratory** 

Who We Are?

The SimSpace Cyber Force Platform (CFP) is the **preferred cyber range** of the US Cyber Command

**#1 commercial cyber** range with over 25,000 live range concurrent emulations

SIMSPACE

**BATTLE-READY** CYBERSECURITY

Cyber range provider to **4 of the top 5** US banks

Cyber range provider to the "Five Eyes" intelligence community

Highest fidelity environments specific uses cases

**SIMSPACE** 2

#### What We Do?

- Military-Grade Cyber Ranges
- ► Elite Force Training
- Live-Fire Exercises Securities Industry and Financial Markets Association "Quantum Dawn"
- ► DARPA RADICS Project Testbed
- ► Stable and robust platform with ranges that contain more than 25,000 VMs!

#### **SimSpace Capabilities for the ReSCIND Program**

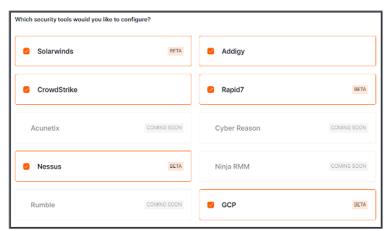

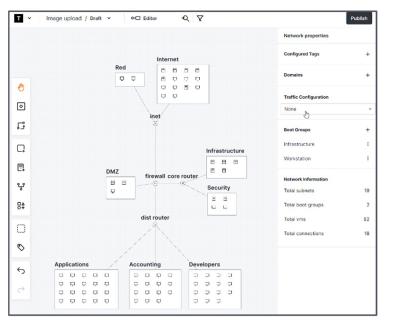

### **Experimental Design**

- Quickly design and build the experimental environment (i.e., a cyber range) using:
  - An intuitive graphic user interface
  - Network specification
- Design from scratch, based on scans of a production network, or start from ready-made network templates (e.g., Bank, Business, Power Co.)
- Deploy a wide range of network elements, security tools, and assets as VMs
- Create a controlled, repeatable and replicable environment
- Automated cyber range set-up and clean up
- Tunable user emulation that perform actions on hosts in realtime and generate traffic
- Design attacks and indicators of compromise

Creating a range by ingesting scans of a real-world network

A UI for creating and editing a network, configuring VM, security tools, software and user accounts

Sample of the attack catalog

#### **Experimental Execution**

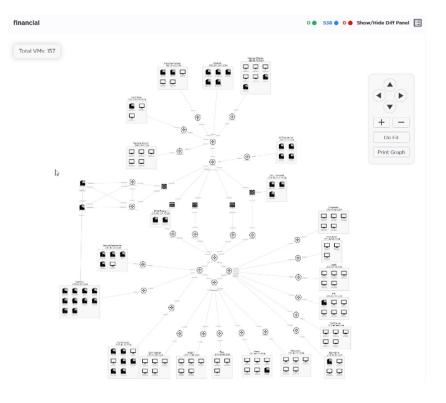

- Multi users real time live events
  - Live or emulated Red Team
  - Blue test subjects can log in from any where
- In platform separate communication channels (Blue, Red, White/Purple)
- Repeatable attack execution in a click of a button with automated AI/ML driven dynamic attack agent
- Custom attack development using an SDK
- Tunable data collection and reporting

### **Supporting Data Collection and Analysis**

- Built-in reporting capability with the ability to expand and log any activity at the host and network levels
- Match between attackers' and defenders' actions
- Real time situational awareness on progress and performance of all participants

### Why SimSpace?

- When studying cognitive biases context matters!
- SimSpace provides the realistic and rich context needed to understand, quantify and design mitigations for cybersecurity related cognitive biases
- Deployable as SaaS or On-Premises
- Automated, scalable, high fidelity cyber ranges
- Hyper-realistic end user, network, and attack simulations
- Embedded advanced data collection and analytics expertise
