The screenshot displays the Janus Inspector Desktop Recorder interface. At the top, there's a header with the user 'JessicaSC', controls for 'Toggle Text' and 'Live Video', and links for 'Settings', 'About', and the Janus Technologies logo. The main area is split into two sections: a desktop screen on the left and a live video feed on the right. The desktop screen shows a Gmail inbox with an email from 'Oleg Okeyuk' and several advertisements for services like '500 Business Cards', 'Fly Virgin America', and 'Mountain View Car Service'. The live video feed shows a woman and a man in an office setting. Below the video feed, there's a 'Speed' control set to 1x and a 'Desktop and Camera (side by side)' toggle. At the bottom, a timeline shows the recording duration from 16:24 to 20:00, with a 'Camera' track showing the video feed and a 'Screen' track showing the desktop content. Below these tracks are graphs for 'Screen Motion', 'Camera Motion', 'Keyboard', and 'Mouse' activity. The bottom of the interface includes a 'Playing' status and navigation controls like 'Back to last position' and 'Size to fit'.
