

# AXON AI

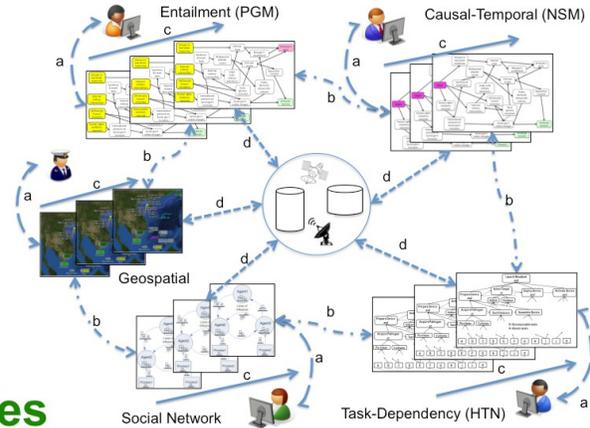

## Research Areas of Interest

Information flows among people, models, and data

### ABC Research, LLC

Superior solutions using

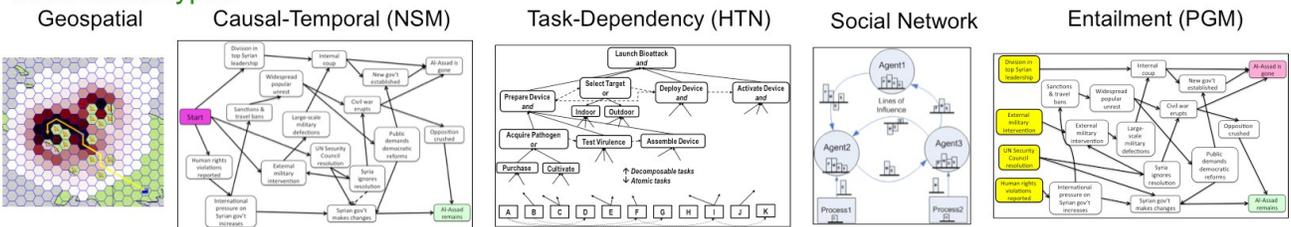

Agent-Based and Complex Systems  
 Physics  
 Biology  
 Linguistics

## Qualifications and Capabilities

(developed in multiple IARPA, DARPA, ONR, and NIST programs)

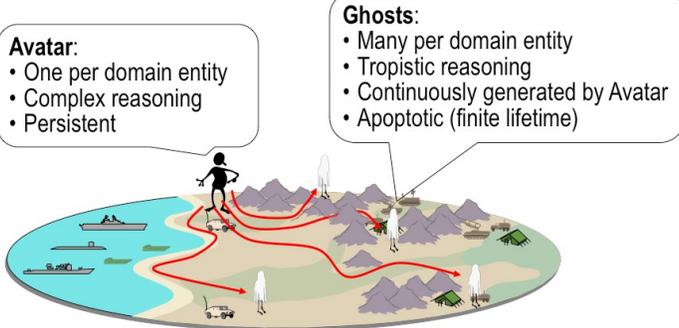

**Representation:** GRAMAR (GRaphical Model of Argumentation) subsumes multiple widely used model types

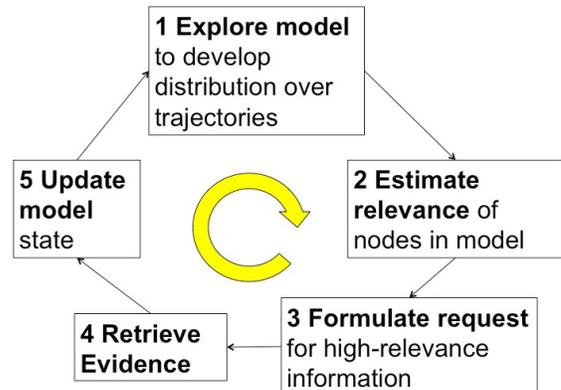

- Node = evidence-bearing statement
- Edge = inference
- Trajectory = hypothesis
- Argument = orthogonal Toulmin or gIBIS structure

**Aggregation:** Polyagents perform stateful, context sensitive MCTS to develop distribution over alternative futures

**Query:** D2REEM matches a graphical hypotheses against data in time linear in the size of the graph

- Avatar:
  - One per domain entity
  - Complex reasoning
  - Persistent
- Ghosts:
  - Many per domain entity
  - Tropistic reasoning
  - Continuously generated by Avatar
  - Apoptotic (finite lifetime)

## Teaming

We bring

- expertise in multiple graphical representations, polyagent inference, and D2REEM
- engineering partners and engines

We seek partners with expertise in

- HCI, group psychology, collaboration theory
- Subject recruiting and management
- Experiment management
